

# Australia's First 10kg Heat Pump Dryer

We have come a long way from our humble beginning of a 4.5kg washing machine, produced in a little village in Sweden. Times have changed and people's washing needs have changed with them. Households tend to be more time poor and grateful for any spare time to do things they enjoy. Recognising the changing needs of families, we have developed a product to suit.

Today we are proud to say, that our range already includes XL – 10kg front loading washing machines and we are introducing a matching XL – 10kg Heat Pump dryer.

## Why did we make a bigger drum for a dryer?

Washing machine capacities are now larger than ever before, to accommodate for greater wash loads and save time for busy households. Having the same capacity on the dryer would allow you to simply transfer the wet clothes from the washing machine to dryer, without having to dry in two separate lots. That's why we have created the 10kg (145L) Heat Pump Dryer (T884XLCHP) to perfectly complement our 10kg washing machines (W8844XL and W8844LECO).

## 6 Star Energy rating

Heat pump technology puts our T884XLCHP among the most energy efficient dryers in the world and SensiDry sensors detect the level of moisture in your clothes and automatically turns off when they are dry. This prevents shrinking as well as saving energy.

## Reduces creasing

Butterfly Drying helps to keep your clothes looking new and fresh by making sure clothing is not rubbing together in the machine. Two paddles inside the dryer gently push the clothing in a figure eight, to spread the garments out and allow air to evenly circulate through them. The large drum also reduces creasing as there is more room for air to circulate evenly through the clothing.

## The Complete range

Our XL range is professionally constructed with a focus on durability, sustainability and design. The XL Heat Pump dryer is the perfect pair for our XL washing machines.
