

Outdoor entertaining just got cooler

New ASKO Outdoor Fridge, purpose-built for Australian conditions

There's no denying Australia's love for the outdoors and outdoor entertaining. What's the perfect accompaniment to this much-loved life style? ASKO's new Outdoor Fridge (R2303), combining superb style and robust design to withstand Australia's weather extremes and add luxury to year-round entertaining.

All weather ready

Keeping cool in the height of an Australian summer can be tough. The ASKO Outdoor Fridge is insulated to withstand ambient temperatures of up to 49 degrees Celsius, meaning it's guaranteed to keep beverages cold. An easy-to-use interface and display means you can always keep an eye on and control temperatures inside the fridge.

IPX4 Water Resistant

Heat isn't the only challenge of alfresco entertaining. With a full stainless steel outer, the Outdoor Fridge has an Ingress Protection (IP) water resistance rating of 4, which means that it's been approved to withstand rain and outdoor elements.

Small but spacious

The 153 litre ASKO Outdoor Fridge boasts tempered glass shelves, removable for easy cleaning and storage. The top shelf splits in half and slides back under itself to allow storage of tall items on the shelf below. Two wine racks feature fully extendable telescopic shelves which can store up to 10 wine bottles and the upper wine rack can be removed to store larger bottles.

Safety

A lockable door allows you to keep children away from alcoholic beverages and child-proof controls prevent kids from altering the temperature without your knowledge. With a host of smart features this is the outdoor fridge you've been waiting for.

The perfect partner

Want to complete your alfresco kitchen? Pair the Outdoor Fridge with ASKO's Outdoor Dishwasher – the first dishwasher designed specifically for outdoor use. With its high end Scandinavian design, convenience, and functionality, it's the perfect companion to any outdoor entertaining area.

The ASKO Outdoor Fridge also includes four adjustable feet, a sealed motor to protect it from vermin and the environment, as well as the ability to be built under a bench or freestanding, making it the perfect addition to the outdoor kitchen.
